BackUp™

Airopedic International Inc. is a leading player in the ergonomic furniture field. Our products are innovative, trendy and fully customizable, created to supply an up-to-date solution to the rapidly changing office environment, keeping in mind the health and safety of the workers on one hand, and the prolonged seating and productivity requirements at the work place on the other. Our unique designs are the perfect answers that make all ends meet.

BackUp™

The BackUp™

The newest concept in promoting health and safety in the work place, our unique BackUp™ chair back, is designed to provide the necessary flexibility and support enabling the user to stretch and exercise right in their chair!

This unique and limited motion when conveniently permitted, is aimed to relieve discomfort after sitting for a period of time without even leaving the work station, promoting the wellbeing and efficiency of the user.

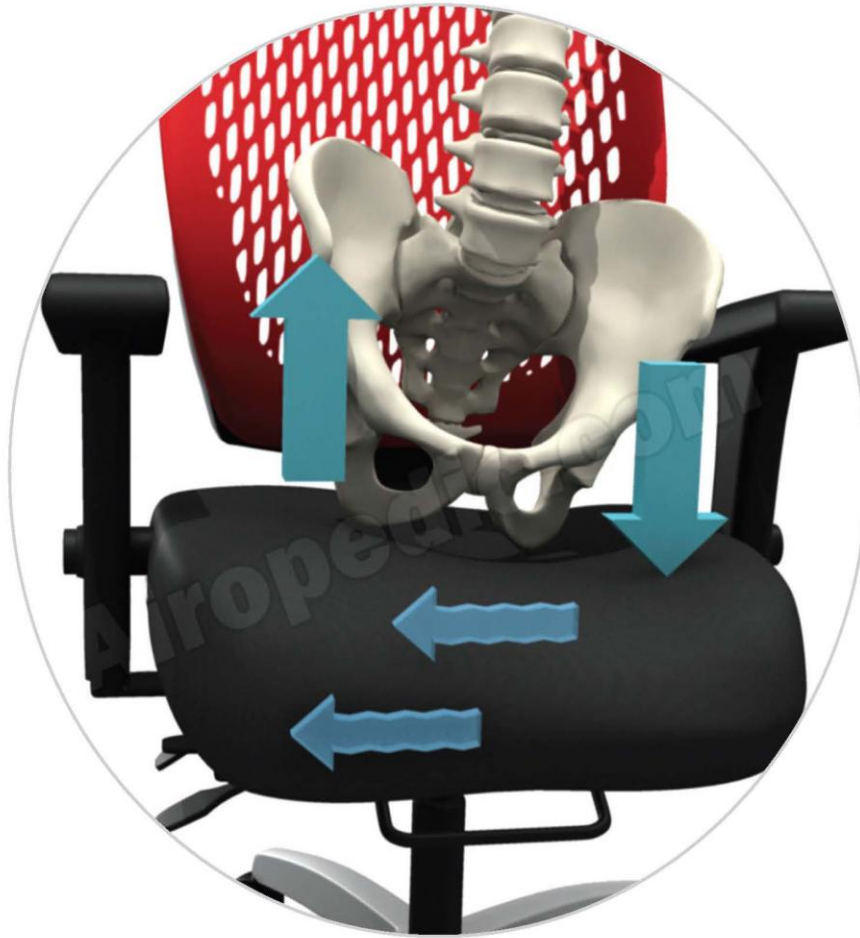

Patent Pending

The Airopedic™ Seat

The Airopedic™ seat is an exceptional seat pan, which automatically adjusts itself according to the posture, weight and structure of the user's body.

A pressure control button enables the adjustments of the seat density, creating a most advantageous seat pan, permitting an increase in the length of time that the user can sit comfortably, and therefore aiming to provide a healthier and more productive work environment.

Patent Pending

PRESSURE CONTROL BUTTON UNDER SEAT

Deflate:
Press while seated

Inflate:
Dismount then press

As a Doctor of Chiropractic and a specialist in body mechanics, I was fortunate to consult and work on the development of the Back-U-up™ Back and Airopedic™ seat.

The current 'ergonomic' chairs are simply not doing the job, my clinic is filled with patients suffering from various repetitive postural conditions due to prolonged sitting.

These two new chair technologies fill the gap where other chairs are lacking. The seat pan continually transfers forces away from the pressure points and the seat back supports and mobilizes the spine. This is a new and leading edge ergonomic technology resulting in comfort and good health, which is something I highly endorse.
